

Dig out street dirt with Rite adjustable nozzles

Rite nozzles have good flow characteristics combined with an efficient nozzle aperture. The water jet dislodges most road surface dirt and debris, effectively depositing it at the road side or curb.

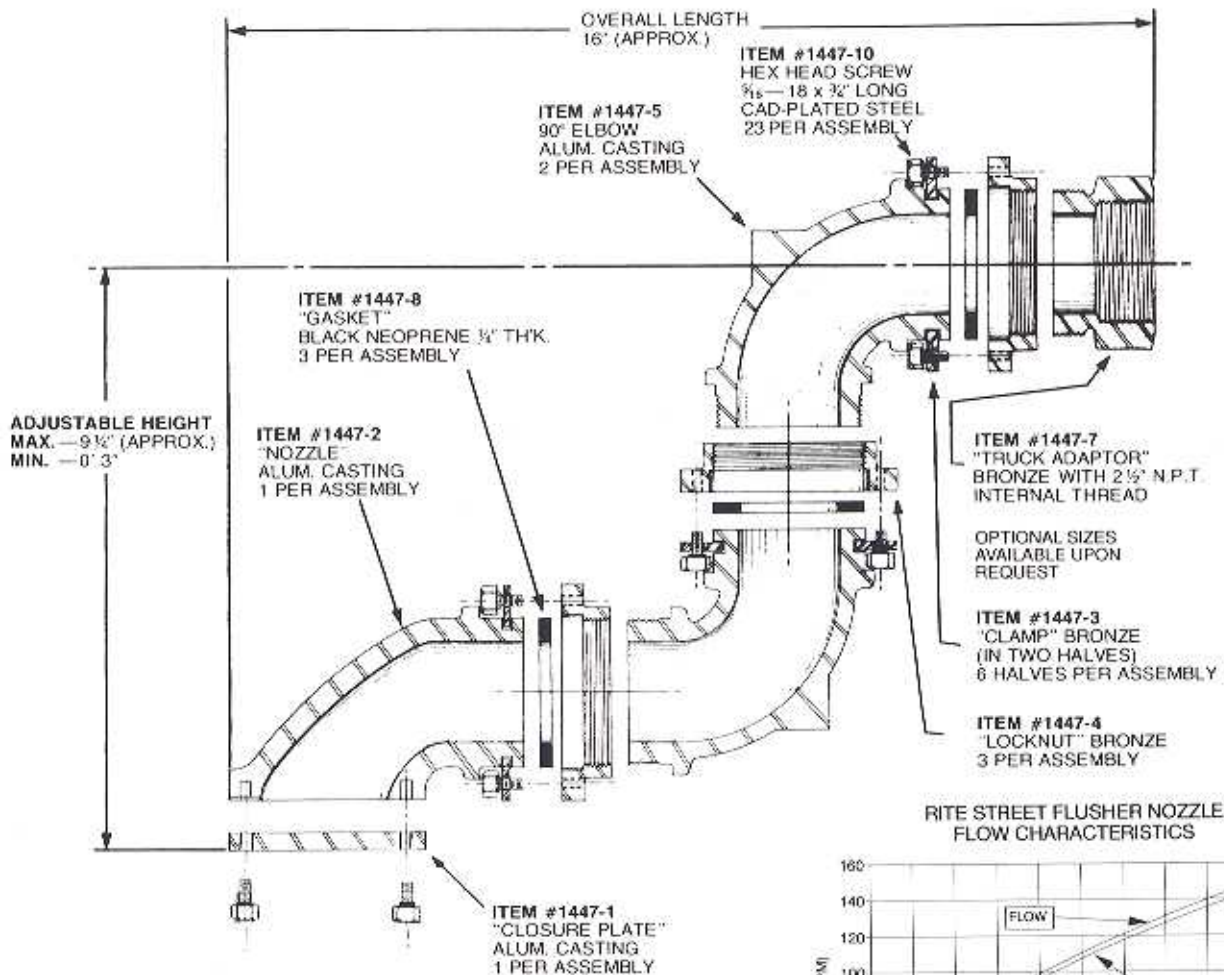

Three separate pivot joints provide both height and angle adjustments to accommodate to any road surface contour. Easily and quickly adjusted with a standard "C" wrench. Rugged, non-corrosive alloys ensure long operating life. Nozzle assembly and replacement parts available from our stock.

Rite nozzles are already in regular use by a number of Canadian municipalities. They are also installed as original equipment by tank truck manufacturers.
